

CURTAIN MEASURING GUIDE

The first step in measuring for curtains is to decide on which style of curtain heading you would prefer. For full details on headings visit the 'curtains' page at <http://agcurtainsdesign.com>

Measuring Width

Tracks and poles should be fitted 15cm above the window recess and centre ensuring there is 15-20cm either side of the window.

Width: Measure the width of your track or pole excluding any finials.

Measuring Length

Tracks

- **All heading types:** Measure from the top of the track.

Poles

- **For Pinch & Pencil pleats:** Measure from the small ring below the larger curtain ring.
- **For Eyelet:** Measure from the top of the pole and add 2.5cm for the upstand.
- **For Slot Tops:** Measure from the top of the pole.

Sill Length: Measure to sill less 1.25cm to prevent wear to curtain hems.

Below Sill: Measure to sill and add 15cm. If there is a radiator below your window it is recommended that your curtain sits 3cm above the top of it so heat can escape into your room and not behind your curtains.

Floor Length: Measure to the floor less 1.25cm to prevent wear to curtain hems.

Tip: If you would like your curtains to drape on the sill or floor for a more relaxed look add extra to the length.

YOUR MEASUREMENTS

The measurements below should include any additions or subtractions as detailed above. Your quote will be calculated on the measurements you provide. AG Curtain Design are not responsible for errors resulting from the supply of incorrect measurements.

Curtain One
Width (cm)

Drop (cm)

- Roman
- Venetian
- Roller
- Panel
- Vision
- Vertical

Curtain Two
Width (cm)

Drop (cm)

- Roman
- Venetian
- Roller
- Panel
- Vision
- Vertical

Curtain Three
Width (cm)

Drop (cm)

- Roman
- Venetian
- Roller
- Panel
- Vision
